The ACCESS Developer Network (ADN)

Technical Resources for Mobile Application Developers

The ACCESS Developer Network (ADN) builds on the legacy of developer support for Palm OS® by introducing support for the ACCESS Linux Platform (ALP). ADN offers a wide range of services for mobile application developers including tools, technical support, and co-marketing resources. With the help of ADN, developers can successfully launch, market, and distribute leading-edge mobile applications for Palm OS and the new ACCESS Linux Platform.

ACCESS Co., Ltd., and its wholly owned subsidiary, PalmSource, Inc., announced the ACCESS Linux Platform (ALP) to bring the power and ease of use of Palm OS to the world of embedded Linux smartphones. ACCESS is positioning ALP to become the worldwide choice for high-volume, feature-rich smartphones and mobile devices, among mobile device manufacturers and mobile operators. Developing mobile Linux applications for ALP presents broad opportunities for existing Linux and Palm OS software developers, broadening their reach into smartphone and wireless markets.

Major components of ALP include the following:

- Standard, commercial-grade Linux kernel version 2.6.12 and above
- Optimized implementation of GIMP Toolkit (GTK+) - popular open source libraries for the creation of graphical user interfaces
- GStreamer - an open source, modular and multi-threaded streaming media framework
- SQLite - a high-performance database engine commonly used in embedded devices

[Become an ACCESS Developer Network Member Today \(Free\)](#)

ALP development is proceeding at a very fast pace. With ADN, get the latest tools and technical information as they become available so that software solutions can be made available as ALP-based devices hit the market. ACCESS and PalmSource expect to make the ALP Software Developer Kit (SDK) and development tools available to ADN members soon; members will be notified upon availability.

Palm OS development resources such as the Palm OS Developer Suite, Emulator, SDK, and knowledge base will continue to be available. With ALP's support for running Palm OS applications, additional tools and technical information for developers wishing to ensure compatibility will be added to ADN as they become available.

[Apply to Become an Inside Track Member for Early Access to Tools and Resources](#)

The ADN Team is taking applications for the Inside Track program. Inside Track members will gain exclusive early access to tools, resources, sync-ups, and business development opportunities. This global program will extend and connect developers to operators and consumers.

Once your application has been submitted, it will be reviewed by a Developer Network Team Member. Upon approval, you will be required to complete a Non-Disclosure Agreement; information submitted remains confidential and is not shared without permission. To apply for Inside Track, go to <http://www.developerpavilion.com/applyInside>.

[Business and Marketing Resources for ADN Members](#)

ADN offers a wealth of business and marketing resources and services.

[Product Development](#)

Tools and Certified Developers to cost-effectively help develop, test, and support your Palm OS and ALP applications.

[Certified Developers](#)

Certified Palm OS developers recommended by PalmSource for custom development.

[Promotion and Distribution](#)

Strategies and support for effectively marketing your mobile applications and online sales channels to help you reach mobile customers worldwide.

[Software Store](#)

Get listed in the PalmSource Software Store on palmsource.com.

[It Shipped Program](#)

Get the word out about your new Palm OS application to hundreds of User Group members worldwide.

[Podcast Promotion](#)

Palm Powered™ device users worldwide want to know about the latest applications, and the ACCESS Developer Network wants to help you reach new audiences. Promote your software by submitting audio files to our podcast feed. Participation is free.
